DD**Shade**Concept®

Color solutions for all workflows

With the DD Shade Concept® set, Dental Direkt puts at your fingertips everything that you need to satisfy all the individual requirements on your patient work. With the three liquid-based dentin colors plus the incisal and effect colors, you always have complete control over your color results and can be sure of the reproducibility of accurate colors as per the VITA® shade guide.

DD Shade Concept®

The overall aesthetics of dental restorations are defined by the shape, size, and color. We developed the DD Shade Concept® with the aim of giving them optimal light dynamics and translucency and creating them in a reproducible manner. With the three liquid-based dentin coloring systems plus incisal and effect colors, we offer an ideal color system coordinated to the different properties of our four types of zirconia. The solution for your personal requirements with all aesthetic possibilities.

Multi Additive Technology

Coloring effects are achieved by the introduction of selected ions from rare soils and transition metals into the zirconium matrix. We describe the balanced formula of the ions and their homogeneous distribution as Multi Additive Technology. When light falls on the surface, certain wavelengths are absorbed and others reflected — this phenomenon in the modified zirconium structure creates the brilliant color effects.

DD Bio ZX^2 and DD Pro Shade Z, cut back, minimal incisal layering, 2 firings, time expenditure of time/individualisation 30 min.

Ion incorporation in the grain boundaries: Dopant 1, Dopant 2, Dopant 3

Bridge: DD cube ONE® and DD Pro Shade Z, cut back, after sintering

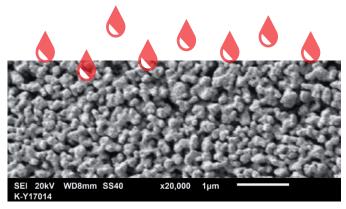

Perfect combination

Laboratory-specific processing parameters such as the sintering temperature and the quantity of liquid introduced affect the intensity, translucency, and chroma of the restoration. The DD Shade Concept® achieves perfect light refraction and makes it possible to avoid negative effects on the color as a result of too high or too inhomogeneous accumulations of pigment elements. During product development, the focus was on the perfect result in the combination of the liquid and zirconia. External studies confirm that the dying of the zirconia has no negative effects on its strength.

The symbiosis of the two materials results in high process stability and optimal color effect.

Finishing touches

The DD Art Elements incisal liquids allow you to regulate the brightness in the incisal third, ensure a smooth color transition, and achieve an increase in translucency compared with the dentin body. The effect colors – applied using brush techniques – are suitable for occlusal, incisal, and cervical areas as well as for gingival coloring. All the liquids are dyed with biopigments for orientation and control during use.

REM pre-sintered structure
Definition of form, size and distribution in the porous canals in pre-sintered blanks.
This results in a specific capillary effect, which is perfect for the viscosity and infiltration of the liquid.

Recommendation

Color concept: Luminance: Intensive chroma, higher gray value

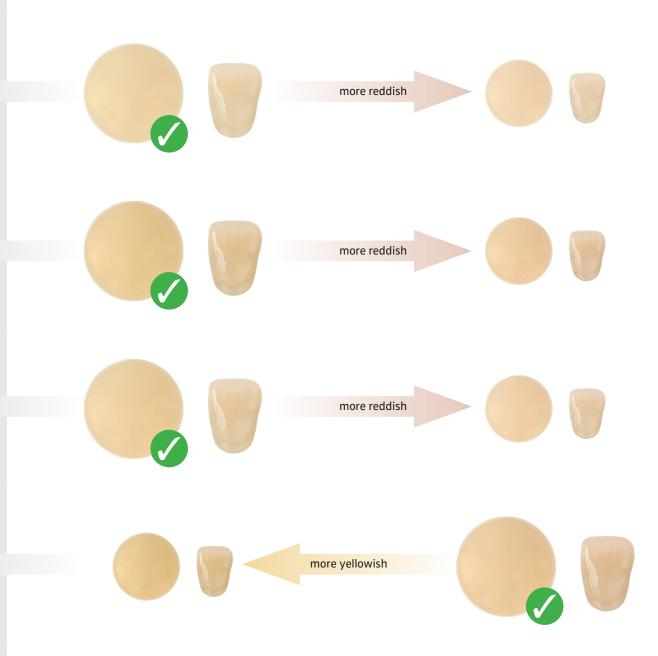

LESS brightness

DD recommendation: Minimal layering (cut back), full veneering,

combination of both techniques

Color concept: Less intensive chroma, warmer shade

Luminance: MORE brightness

DD recommendation: Combination with DD cube ONE $^{\circ}$ (HT+) and DD cubeX2 $^{\circ}$ (SHT)

Perfect basis for individual painting of monolithic crowns and bridges

(DD contrast® color and form concept by Andreas Nolte) or minimal layering (cut back)

DD cube ONE®

DD cubeX[®]

Recommended use:

- Universally applicable
- With all DD dentin liquids
- With all DD zirconia types

Incisal

For occlusal and incisal individualisation

Color		Order-no. 15 ml
SA1	for painting (OM3·A1·A2·B1·B2)	LAE15SA1
SA2	for painting (A3·A3.5·A4·B3·B4)	LAE15SA2
SC1	for painting (C1·C2·D2)	LAE15SC1
SC2	for painting (C3·C4·D3·D4)	LAE15SC2
SO	for painting (0M1·0M2) for dipping (all dentine colors)	LAE15SO
SO Bright	for painting (OM1-OM2) for dipping (all dentine colors) developed specially for DD cube ONE®.	LAE15SOB

Effect colors

For individualisation, to shade the dentine colors, or simply for the characterization of e.g. fissures, incisal areas or gingival areas.

Coloring solution to be used with white Dental Direkt zirconium oxide milling blanks.

i Cons

Incisal SO/SO Bright

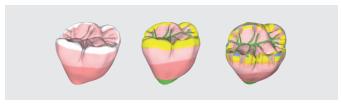

Optimized for efficient dipping technique

SO Bright produces more intense brightness in the incisal area. Recommended for use with DD cube ${\rm ONE}^{\circ}.$

Incisal SA/SC

Optimized for individual brush technique

Vario

To brighten the dentine colors

Article	Order-no. 30 ml
Variation liquid	LAE30V
